

High risk, high alert.

At Urban Utilities we see safety as more than the absence of unwanted outcomes; it is the ability to achieve great things together and enrich the quality of life for each other, and our communities.

So when it comes to undertaking high-risk activities in our line of work – those that have the potential to cause the significant harm if not effectively managed, we want to:

- Understand and identify these hazards,
- Have access to clear and effective critical controls, and
- Continually improve the way we manage high risk activities

By doing so, we can continue to drive innovation and develop our improved safety processes for a safer, smarter tomorrow.

Our **12 high risk activities (HRA'S)**!

Working at heights

Confined spaces

Energy isolation

Excavation & trenching

Hazardous chemicals

Traffic management
