

As-Constructed Package Certification

Queensland Urban Utilities Development Services GPO Box 2765 BRISBANE QLD 4001 07 3855 6896 www.urbanutilities.com.au/development-services

Submission of a certified As-Constructed Package is required for the issue of a Queensland Urban Utilities Connection Certificate. As-Constructed information relates to the construction of drinking water, non-drinking water and/or wastewater connection(s) where the Network Infrastructure and/or Property Service infrastructure has been conditioned by Queensland Urban Utilities to be designed, constructed and maintained. Please note complex donated assets may require additional documentation and certification requirements (e.g. pump stations, large diameter trunk mains, reservoirs, treatment plants etc.)

For advice, email development.compliance@urbanutilities.com.au or phone 07 3855 6896.

Application details

Application reference (e.g. 16-PNT-12345)		Stage (if applicable)	
Classification of works		Council Development Assessment reference	
Minor works Major works			
As-Constructed Package Certification			
I certify, as an RPEQ Engineer, that the As-Con and all documentation has been uploaded to t			quirements (refer below)
The following checklists have been completed	accurately:		
 A. Standard requirements (for all applicati B. New water infrastructure requirements C. New sewer infrastructure requirements 		D. Water connection alteration requiremE. Sewer connection alteration requirem	
Name		RPEQ no.

Queensland Urban Utilities Development Services GPO Box 2765 BRISBANE QLD 4001 07 3855 6896 www.urbanutilities.com.au/development-services

Bacteriological test report For all new water mains construction. □ Provided Compaction test report For all new water mains, property services ≥ DN100 and/or □ Provided Flushing undertaken Flushing was undertaken for all water mains. □ Onfirmed Pressure test report For all new water mains and property services (unless otherwise stated □ Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property □ Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property □ Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property services is and/or □ provided • more than 4 Duterss of pipe and/or • servicing more than 4 lots and/or □ Provided • more than 4 Duterss of pipe and/or • servicing more than 4 lots and/or □ Provided • there are any works on the main □ Provided □ Not required Vacuum test report Required for property services and sewer mains if: □ Provided • there are any works on the main □ the internal diameter rester □ Provided COTV report & footage For all sewer mains and property services that are 12m or greater. □ Provided	Documentation	Description	Status
Water meter installation form When a new water meter is installed and/or removed to/from a property. Provided Bacteriological test report For all new water main construction. Provided Compaction test report For all new water mains, property services > DN100 and/or Provided Flushing undertaken Flushing was undertaken for all water mains. Confirmed Provided Pressure test report For all new water mains and property services (unless otherwise stated by Gueenshand Urban Utilities). Provided Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property service is: Provided Not required Server as-constructed (ADAC) A XML file and PDF survey is required when the water main or property service is: Provided Not required Sever as-constructed (ADAC) A XML file and PDF and DWG formats (based on original design drawings) as per SEQ Code - Asset Information Specification. Provided Not required Vacuum test report Required for property services and sever mains if: Provided Not required Vacuum test report For all new sever mains and property services crossing roads. Provided Correct test report For all new sever mains and all property services crossing roads. Provided	B. New water infrastructure requirement	3	
Bacteriological test report For all new water main construction. Provided Not required Compaction test report For all new water mains, property services ≥ DN100 and/or Crossing roads. Confirmed Pressure test report For all new water mains and property services (unless otherwise stated Provided Not required Asset Design As-Constructed (ADAC) AXML file and PDF survey is required when the water main or property Service is: more than 40 metres of pipe and/or internal diameter greater than 50mm, C. New sewer infrastructure requirements internal diameter greater than 50mm, C. New sewer infrastructed drawings In both PDF and DWG formats (based on original design drawings) as per SEQ Code – Asset Information Specification. Required d rawings In both PDF and DWG formats (based on original design drawings) as per SEQ Code – Asset Information Specification. Required to ray services and sewer mains if: The ray required the ray required when the sever mains or provided Not required to the ray are yworks on the main the internal diameter is ≥ DN150. Compaction test report For all new sever mains and all property services crossing roads. Provided CCTV report & footage For all sever mains and all property services that are 12m or greater. Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Concrete test certificates or delivery dockets for all concrete mains on the property. Asset Design As-Constructed (ADAC) Service is 12m or greater The non-land AU file and PDF survey is required when the sever main or property Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Provided Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Provided Not required Service is: The main and 12 metres of pipe and/or Service is constructed (ADAC) Service is: The required ATM file and PDF survey is required when the sever main or property Not required Concrete test results Concrete test certifi	Certified water as-constructed drawings		Provided
Compaction test report For all new water mains, property services ≥ DN100 and/or Provided Flushing undertaken Flushing was undertaken for all water mains. Confirmed Pressure test report For all new water mains and property services (unless otherwise stated Provided Abstract For all new water mains and property services (unless otherwise stated Provided Abstract For all water main and property services (unless otherwise stated Provided Abstract For all water main and pump stations located within private property. Provided Abstract For all new water mains and property services and source main or property Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property Provided Severe as-constructed drawings In both PDF and DWG formats (based on original design drawings) as Provided Vacuum test report Required for property services and sewer mains if: Provided Not required CV report & footage For all new weer mains and property services that are 12m or greater. Provided Not required Not required Not required CV report & footage For all sever mains and property services for all correte manholes. Provided	Water meter installation form	When a new water meter is installed and/or removed to/from a property.	Provided
crossing roads. Not required Flushing undertaken Flushing was undertaken for all water mains. Confirmed Pressure test report For all new water mains and property services (unless otherwise stated by Queensland Urban Utilities). Provided Easement and/or transfer documentation For all water main and pump stations located within private property. Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property service is: Provided Asset Design As-Constructed (ADAC) A XML file and PDF and DWG formats (based on original design drawings) as service is: Provided Sever as-constructed drawings In both PDF and DWG formats (based on original design drawings) as service is: Provided Vacuum test report Required for property services and sever mains if: Provided • there are any works on the main Not required • the property service is 12 moriget Provided • the internal diameter is ≥ DM150. Not required Cortro test report For all new sever mains and property services toral and requirements. Not required Cortro test report For all new sever mains and all property services toral and requirements. Not required Cortro test report For all sever mains and all property services toral	Bacteriological test report	For all new water main construction.	
Pressure test report For all new water mains and property services (unless otherwise stated by Queensland Urban Utilities). Provided Easement and/or transfer documentation For all water main and pump stations located within private property. Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property service is: Provided Asset Design As-Constructed (ADAC) A XML file and PDF and DWG formats (based on original design drawings) as per SEC Code – Asset Informats (based on original design drawings) as per SEC Code – Asset Informats (based on original design drawings) as per SEC Code – Asset Informats (based on original design drawings) as per SEC Code – Asset Informats (based on original design drawings) as per SEC Code – Asset Information Specification. Provided Vacuum test report Required for property services and sewer mains if: the reare any works on the main the internal diameter is ≥ DN150. Provided COTV report & footage For all new sewer mains and property services that are 12m or greater. To be submitted as per SEC Code format and requirements. Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Not required Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the sever main or property service is: Provided Our requirements Concrete test certificates or delivery dockets for all concrete manholes. Not required	Compaction test report		
by Queensland Urban Utilities), Not required Easement and/or transfer documentation For all water main and pump stations located within private property. Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property services is: Provided • more than 40 metres of pipe and/or • servicing more than 40 tots and/or • internal diameter greater than 50mm. C. New sewer infrastructure requirements In both PDF and DWG formats (based on original design drawings) as per SEQ Code – Asset Information Specification. Provided Vacuum test report Required for property services and sewer mains if: Provided • there are any works on the main • Not required Not required • the property services and sewer mains if: Provided Not required • the property services and sewer mains if: Provided Not required • the property services and sewer mains if: Provided Not required Compaction test report For all new sewer mains and property services crossing roads. Provided Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Provided Not required For maintenance structures, rising mains and greater than 300mm sewer Not required	Flushing undertaken	Flushing was undertaken for all water mains.	Confirmed
Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the water main or property service is: • more than 40 metres of pipe and/or • more than 40 metres of pipe and/or • servicing more than 4 lots and/or • internal diameter greater than 50mm. • not required Sewer as-constructed drawings In both PDF and DWG formatic (based on original design drawings) as • Provided Vacuum test report Required for property services and sever mains if: • Provided • there are any works on the main • Not required • the property service is 12 mor greater • manhole is built as part of new main • Not required • the internal diameter is ≥ DN150. Compaction test report For all new sever mains and property services that are 12m or greater. • Provided COTV report & footage For all sever mains and property services that are 12m or greater. • Not required • the internal diameter is ≥ DN150. • Not required • Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. • Provided • Not required • Not required • Not required Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the sever main or property • Provided Asset Design As-Constructed (ADAC) <td>Pressure test report</td> <td></td> <td></td>	Pressure test report		
service is: • more than 40 metres of pipe and/or • servicing more than 4 lots and/or • internal diameter greater than 50mm. C. New sewer infrastructure requirements Sewer as-constructed drawings In both PDF and DWG formats (based on original design drawings) as per SEQ Code – Asset Information Specification. Vacuum test report Required for property services and sewer mains if: • Provided • there are any works on the main • there are any works on the main • there are any works on the main • the property services is 12m or greater • manhole is built as part of new main • Not required CCTV report & footage For all new sewer mains and property services that are 12m or greater. • Provided Not required To be submitted as per SEQ code format and requirements. • Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. • Provided Rot required For all new property. required • Not required Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the sewer main or property • Provided Not required • more than 12 metres of pipe and/or • internal diameter greater than 150mm. • Not required D. Water connection alteration requirements	Easement and/or transfer documentation	For all water main and pump stations located within private property.	
Sewer as-constructed drawings In both PDF and DWG formats (based on original design drawings) as per SEQ Code – Asset Information Specification. Provided Vacuum test report Required for property services and sewer mains if: Provided • there are any works on the main • there are any works on the main • Not required • there are any works on the main • there are any works on the main • Not required • the internal diameter is ≥ DN150. Compaction test report For all new sewer mains and property services crossing roads. Provided CCTV report & footage For all sewer mains and all property services that are 12m or greater. Provided Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Provided Not required Easement and/or transfer documentation For maintenance structures, rising mains and greater than 300mm sewer mains on the property. Provided Not required A XML file and PDF survey is required when the sewer main or property service is: • more than 12 metres of pipe and/or • servicing more than 41 soft/or • provided Not required D. Water connection alteration requirements (re-use only) When a new water meter is installed and/or removed to/from a property Provided Not required E. Sewer connection alterati	Asset Design As-Constructed (ADAC)	 service is: more than 40 metres of pipe and/or servicing more than 4 lots and/or 	
Vacuum test report Required for property services and sewer mains if: Provided • there are any works on the main • there are any works on the main Not required • there are any works on the main • there are any works on the main Not required • the property service is 12m or greater • manhole is built as part of new main • the internal diameter is > DN150. Compaction test report For all new sewer mains and property services crossing roads. Provided COTV report & footage For all sewer mains and all property services that are 12m or greater. To be submitted as per SEQ code format and requirements. Not required Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Provided Not required Easement and/or transfer documentation For maintenance structures, rising mains and greater than 300mm sewer Provided A XML file and PDF survey is required when the sewer main or property Provided Not required A XML file and PDF survey is required when the sewer main or property Provided Not required D. Water connection alteration requirements (re-use only) Wen a new water meter is installed and/or Not required CTV Report & Footage When an existing property connection is being reused (i.e. for increased demand). P	C. New sewer infrastructure requirement	S	
• there are any works on the main • the property service is 12m or greater • the property service is 12m or greater • manhole is built as part of new main • the internal diameter is ≥ DN150. Provided Compaction test report For all new sewer mains and property services crossing roads. Provided CCTV report & footage For all sewer mains and all property services that are 12m or greater. Provided Concrete test results Concrete test certificates or delivery dockets for all concrete manholes. Not required Easement and/or transfer documentation For maintenance structures, rising mains and greater than 300mm sewer Provided Asset Design As-Constructed (ADAC) A XML file and PDF survey is required when the sewer main or property Provided 0.
