

Working beneath the streets

Coronation Drive, Brisbane CBD

13 November 2020

What is happening?

Our delivery partner, Diona, will soon start work on replacing sections of the water mains along **Coronation Drive**. We'll start work on **22 November 2020** and expect to be finished in **mid-January (this includes a 2 week break over the Christmas period)**, weather and site conditions permitting. Work will take place on the **odd numbered** side of **Coronation Drive** between **Exford Street** and **Eagle Terrace**. Our work will be completed during the night from **6pm to 6am, Sunday to Thursday**. This work has been scheduled after-hours to comply with approved traffic permits and minimise the impacts of planned water outages when we connect the new water main to the network.

Why is this happening?

The water mains on Coronation drive are reaching the end of their life cycle and need to be upgraded and upsized. Upgrades to the network will ensure that we can keep moving the water to your taps. Crews will endeavour to complete high noise work as early as possible each night, site conditions permitting.

Map of the construction area

Parking, traffic and pedestrian access

Our work areas will be behind barriers. Please observe all site signage and barriers – they are there to keep you and our workers safe. Lane/road closures will be required, however access to driveways will be maintained. You may experience minor delays when working in front of your property. Traffic control will be in place to assist pedestrians and general traffic around work areas. Some on street parking might be temporarily unavailable.

Temporary water outages

To replace the pipes, we will need to temporarily disconnect properties while we work to transfer you to the new water main. We'll give you five days' notice prior to any temporary water outage. Keep a look out in your email inbox for the update. Only properties effected by water loss will receive a water outage notification.

Noise and dust

The work will have elevated noise levels at times however the majority of the water mains replacement will be done by pipe bursting method which will minimise noise impacts, however some sections will require trenching and excavating. Nearby residents and businesses might be impacted by these elevated noise levels, we will minimise our impacts where possible. We will complete all avoidable high impact noise activities early in the shift.

Restoration

Please be aware that temporary resurfacing to roads, driveways and footpaths will be in place during our works. After we have completed installing each section of pipe, we will be restoring these areas.

Important information for Building Managers

Fire alarms, sprinkler systems, domestic water pumps, tanks and cooling towers might be affected by water interruptions. We recommend Building Managers contact the relevant fire and equipment service provider for advice about preparing your building systems before an interruption. Although our planned works may impact properties for a short period and cause temporary inconvenience, the newly installed water mains will ensure reliability and sustainability of water services in your area which will benefit the property and the greater community in the long term.

Find out more

We'll provide further updates as the project progresses, or get in touch:

- Phone 1300 13 13 38
