BRISBANE CITY COUNCIL

Pressure Gauge Switchboard P0404

Royston St Brookfield

Contract : **BW 70103-048**

Job Number : **WT400106**

ELECTRICAL INSTALLATION

OPERATIONS and MAINTENANCE MANUAL

INSTALLATION BY:

SJ Electric (Qld) Pty Ltd
19 Elliot Street
Albion Qld 4010

Telephone: 07 3256 1522 Fax: 07 3256 1533

INDEX

1. General

1.1 General Workplace Health and Safety

- The Workplace Health and Safety Act (1995) sets out the laws about Workplace Health and Safety for all workplaces, workplace activities and specified high risk plant. The Electrical Safety Act (2002) sets out the laws covering electrical safety. Nothing in this document is designed, in any way, to undermine the authority of the Acts.
- All reasonable care must always be taken to ensure the plant is without risk to the health and safety of personnel operating and maintaining plant and equipment.
- Employers have an obligation to ensure the workplace health and safety of all personnel at work.
- It is employer responsibility to ensure that all persons entering or working on the premises use appropriate personal protective equipment.
- Personal protective equipment includes gloves, safety glasses, hard hats, ear protection, safe foot ware and, where necessary, specialist protective clothing for hazardous areas.
- Any item of equipment should always be isolated before maintenance or repairs commence to ensure that inadvertent operation of the item does not result in risk to the health and safety of any person.
- Where the item is isolated, any total or partial shutdown should not allow a hazardous situation to be created.
- Where the item cannot be isolated, another person should be stationed at the controls of the item and an effective means of direct communication should exist between the persons carrying out the maintenance and the person at the controls.

General Operating Principles

- All persons working the premises must be qualified Electrical Engineers or electrical trades persons capable of performing the required tasks competently. All personnel must also be familiar with plant and equipment.
- Adequate information, instruction, training and supervision must be provided to enable personnel to perform work without risk to health and safety.
- Work in an orderly way.
- Plan work in advance to avoid hazardous situations.
- Warn others of any hazards.
- Make inquiries before starting work, particularly on any unfamiliar installation or equipment.
- Before any work begins ensure that any instructions received or given are fully understood.
- Concentrate on the task on hand.
- Do not distract others or allow yourself to be distracted by foolish actions.
- Work from a safe and convenient position that provides a maximum working space that you do not have to over reach, you cannot slip, trip or stumble and so endanger yourself and others.
- Keep the working area tidy and free of unwanted materials and equipment.
- Use insulated tools where possible.
- Inspect tools and equipment regularly and ensure that any necessary maintenance is carried out.
- Keep yourself in good health.
- Do not work if ill or over tired, to the extent that your concentration, movement or alertness is affected. Illness or fatigue can endanger yourself and others.

1.2 Project Overview

Contract BW70103-048 was for the manufacture and testing of ten (10) new Pressure switchboards for various locations throughout Brisbane.

Equipment provided by SJ Electric ensures safe and efficient operation of the pump stations. Equipment supplied and installed by SJ Electric includes: -

- Switchboards
- Instrumentation
- Civil Works

The switchboard incorporates the latest technology in power monitoring, and instrumentation. It is important engineers, technicians and operators are familiar with the equipment installed before attempting any adjustments, modifications or maintenance.

The following Sections of this manual contain a comprehensive description of all equipment supplied, by SJ Electric. It is recommended that this manual be referred to before carrying out any work on any equipment.

1.3 Plant Maintenance

To ensure proper operation of the plant the following should be observed: -

- The plant should be kept clean and tidy at all times. Not only is this of aesthetic value, it extends equipment life.
- Check that all plant and equipment is operating correctly. Correctly operating equipment promotes overall plant efficiency.
- All items and areas of equipment should be hosed down and cleaned regularly.

WARNING

- **Avoid directly hosing <u>any</u> drive motor or electrical item.**

- All maintenance, service, modifications and significant deviations from Normal operating conditions should be recorded in the Plant Service Log
- After a month of operation, check the tension of all bolts associated with the plant and thereafter periodically. Bolted connections on painted surfaces can loosen due to thinning of the paint underneath the bolt head-bearing surface. Motor mounting bolts and other bolted connections subjected to vibration should be periodically checked for loosening.

WARNING

- **Before starting work on any item ensure that the power supply is isolated, tagged off, and the item cannot be started.**

- The importance of preventative maintenance cannot be over-emphasized. Regular maintenance and suitable care of the equipment will ensure a long and reliable service life of the equipment.
- Many stoppages can be avoided by following the recommended maintenance procedures. Do not wait until you hear the grinding of equipment that has broken down. If you see any item wearing down, replace it, before it causes damage to other associated items.

Preventive Maintenance

Maintenance procedures recommended to extend switchboard life are outlined as follows: -

- Switchboard exterior should be regularly wiped down with a solvent base cleaner such as “Spray & Wipe”. This will ensure longevity of the powder-coated surface.
- Accessible areas like distribution boards and motor starter panels should be cleaned with a vacuum cleaner to remove dust and foreign matter.
- RTU panels should be maintained as dust free as possible. Dusting with a dry rag is recommended - taking care not allows dust inside the I/O modules or processor.
- When removing or installing PLC modules care should be taken to ensure that power is turned off to the rack before modules are removed or installed.
- Connections and efficient operation of circuit breakers, contactors and isolators should be checked every 12 months - especially where connected to busbars.
- Busbar connections should be checked every 12 months.
- Globes for indicator lights should be checked on a weekly basis with any faulty lamps replaced.
- Cubicle Fans Filter should be inspected and cleaned frequently.

1.4 Electrical Control System

General Description

The switchboards are manufactured from 3mm aluminium and are suitable for location outdoors; the switchboards have been designed by Brisbane Water and contain several separate sections including:

- Incoming Section.
- Distribution Section.
- RTU Section.

1.5 Control and Monitoring System.

The control and monitoring of the system is performed by the Brisbane Water telemetry system and was not included in this contract.

2. MANUFACTURER'S TECHNICAL DATA

2.1 Critec DAR-275V Alarm Relay

ERICO

DINLINE ALARM RELAY (DAR)

INSTALLATION INSTRUCTIONS

MODEL NUMBER
DAR 275V

1. PREPARATION

DANGER: *Electrical shock or burn hazard. Installation of this device should only be made by qualified personnel. Failure to lockout electrical power during installation or maintenance can result in fatal electrocution or severe burns. Before making any connections be sure that power has been removed from all associated wiring, electrical panels, and other electrical equipment.*

CAUTION NOTES:

1. *The installation of this device should follow all applicable electrical codes, such as the National Electrical Code.*
2. *Check to make sure line voltage does not exceed DAR275V voltage ratings.*
3. *Follow all instructions to ensure correct and safe operation.*
4. *Do not attempt to open or tamper with the DAR in any way as this may compromise performance and will void warranty. No user serviceable parts are contained.*

2. INTRODUCTION

Selected DSD, TDS & TDF DINLINE Surge Protection Devices include status monitoring circuits which provide visual status display of device capacity. They may also provide a low voltage opto-coupler alarm output circuit that can be connect to the DAR to provide potential free (Form C) change-over contacts. The DAR alarm contacts may be used to provide output to external alarm systems or remote monitoring circuits.

One DAR can be used per DSD/TDS/TDF opto-coupler alarm or up to 16 DSD opto-coupler alarms can be connected in series to the one DAR to provide a common output. It is recommended that the DAR be powered from the same power circuit that feeds the device(s) being monitored, however the DAR can be powered from other circuits. This allows for example, one DAR unit to be connected to separate SPDs that are protecting a three phase circuit.

Note. Depending upon the usage of the DAR output contacts, failure of power to the DAR may be interpreted as a failure of one or more of the SPDs being monitored. Visual inspection of the DAR and SPDs status displays would determine this.

3. MOUNTING

The DAR is designed to clip to 35mm (top hat) DIN rails (standard EN50022). Unless otherwise mechanically restrained, use horizontal DIN rails with the DAR module spring clips to the bottom and the label text the correct way up.

NOTE: The DAR must be installed in an enclosure or panel that:

- *prevents the DAR temperature from exceeding 131°F (55°C)*
- *provides adequate electrical and safety protection*
- *prevents the ingress of moisture and water*
- *allows DAR status indicators to be inspected*

4. ELECTRICAL CONNECTION

The interconnecting wiring should:

- be of size #10 to #14 AWG (2.5mm² to 6mm²) solid or stranded conductor.
- The wire insulation should be stripped back 5/16" (8mm).
- NOTE: Do not use greater than 9inlbs (1Nm) of torque when tightening the terminals.

CONNECTION TO TELECOMMUNICATIONS NETWORKS

The DAR is approved for use in Australia where the alarm contacts may be connected to private lines or building cabling associated with the telecommunications network. NO direct connection to the public switched network should be made.

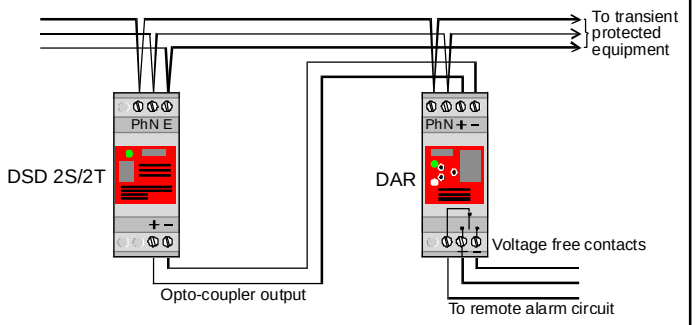
ERICO

DINLINE ALARM RELAY

INSTALLATION INSTRUCTIONS

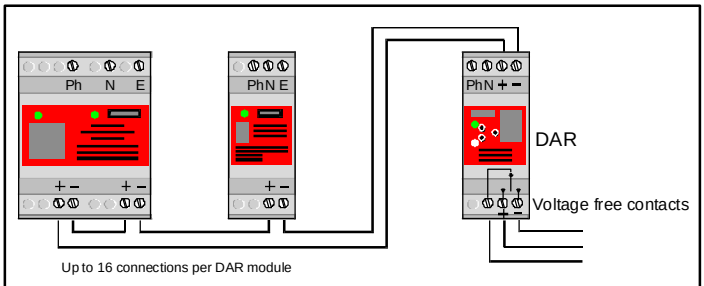
5. INTERCONNECTION

When connecting the DAR to a single opto-coupler output the + terminal of the SPD should connect to the + terminal on the DAR. The – terminal should connect to the -- terminal.



+/- terminal connections are polarity sensitive. Do not reverse.

When connecting the DAR to multiple opto-couplers the opto-couplers should be connected in series with + terminal of one connected to the – terminal of the next. The DAR + terminal should connect to + SPD terminal at one end of the series connection and the – DAR terminal connect to the – SPD terminal at the other end of the series connection.



+/- terminal connections are polarity sensitive. Do not reverse.

5. STATUS INDICATION

	✓	!	✗
STATUS	Protection Operational	Protection Alarm	Fault Mode
DISPLAY	Normal / Fault (8, 4, 6)	Normal / Fault (8, 4, 6)	Normal / Fault (8, 4, 6)
EXPLANATION	Normal operation Normal (green) indicator ON Red indicator OFF Relay is energised Power is supplied	DSD in alarm mode or power to DSD has been removed Normal (green) indicator OFF Red indicator ON Relay is de-energised Power is supplied	Power to DAR removed Protection status unknown Normal (green) indicator OFF Red indicator OFF Relay is de-energised Power is OFF

6. FUSING AND ISOLATION

Overcurrent protection must be installed in the upstream circuit of the power supply to the DAR to provide protection to the unit itself and the wiring in case of fault conditions.

The fuse rating should be based on the wiring size used to connect to the DAR Ph & N terminals. Australian regulations AS3000-1991, Table B2 specifies the following upstream protection for single phase circuits, unenclosed in air.

Cable Size	HRC Fuse or	CB Rewirable Fuse
1.5mm^2	16A	12A
2.5mm^2	20A	16A
4mm^2	25A	20A
6mm^2	32A	25A

Where overcurrent protection of the appropriate rating or smaller is already fitted in the upstream circuit, overcurrent protection at the DAR will not be required

6. MAINTENANCE & TESTING

Before removing a DAR unit from service, ensure that the power has been removed. Maintenance, testing and replacement should only be undertaken by qualified personnel.

Testing of a DAR unit which is connected to a fully functional DSD unit can be accomplished by removing power to the DSD only. The DAR Status indication and output contacts should alter from the Normal to Fault condition.

Testing of the DAR unit alone may be accomplished by disconnecting the + / -connections to the unit. When power is applied the DAR “Fault” Status Indicator should be illuminated. By connecting the + / - terminals together, the “Normal” Status Indicator should be illuminated. The output contacts should alter to the appropriate state.

7. USE OF OTHER INTERFACES

Only DAR units are recommended for the interfacing of equipment to the DSD, TDS & TDF opto-coupler alarm output circuit(s). The direct connection of other equipment to these opto-coupler alarm outputs may not provide sufficient isolation or exceed the opto-coupler specifications. This may damage the SPD and/or the connected equipment. Warranty may be voided under such circumstances.

NOTE: *In connecting to the SPD opto-coupler alarm output(s), do not reverse the +/- connections as damage may occur.*

2. MANUFACTURER'S TECHNICAL DATA

2.2 Trio DR900-06A02-D0 Radio.

TC-900DR USER GUIDE

41 Aster Avenue Carrum Downs 3201 Australia Tel: 61 3 9775 0505 Fax: 61 3 9775 0606

GENERAL

The Trio DataCom TC-900DR is a full duplex 900 MHz Radio featuring a fully integrated 4800/9600 bps data radio modem and antenna diplexer. Configuration of the unit is fully programmable, with parameters held in non volatile memory (NVRAM). All configuration parameters are accessible using the TC-DRPROG installation package, consisting of a programming lead, manual and software which will run on a PC under Windows 95/98/NT. It is essential that each unit is programmed to suit individual requirements prior to operation. *For detailed information refer to the TC-900DR Handbook.*

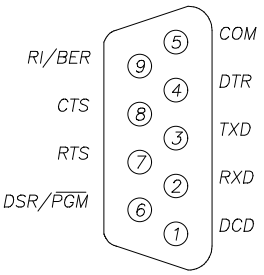
DATA CONNECTION

The data connection is via a DB9 connector labeled 'Port A' (shown below), which is wired as a DCE.

User Serial "Port A" Pin Assignment.

EXTERNAL VIEW OF `**PORT A**

NOTE: Pin 6 and pin 9 provide a dual function which depends on the mode that the TC-900DR is operating in.

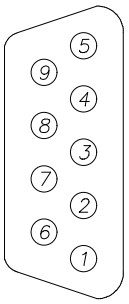


PIN NO. & FUNCTION
1. DATA CARRIER DETECT (DCD)
2. RECEIVE DATA OUTPUT (RXD)
3. TRANSMIT DATA IN (TXD)
4. DATA TERMINAL READY (DTR)
5. COMMON (COM) ___
6. PROGRAM PIN (PGM)
7. REQUEST TO SEND (RTS)
8. CLEAR TO SEND (CTS)
9. BIT ERROR RATE PIN (BER)

User Serial "Port B" Pin Assignment.

Port B can be used as a secondary data steam (independent of Port A) once configured by the programmer. Port B also has one connection that may be of use for installation. This connection (Pin 9) is Receive Signal Strength Indicator (RSSI) output. 0-5V where 1.5V typically indicates -110dBm and every 0.5V increase indicates an improvement of » 10dBm.

EXTERNAL VIEW OF `**PORT B'**



PIN NO. & FUNCTION
1. DATA CARRIER DETECT (DCD)
2. RECEIVE DATA O/P (RxD)
3. TRANSMIT DATA O/P (TxD)
4. UNUSED
5. COMMON
6. DATA SET RECEIVE (DSR)
7. UNUSED
8. UNUSED
9. RECEIVE SIGNAL STRENGTH

NOTE: Port B Pin 9 output has a high impedance of around 50K OHMS and loading will decrease accuracy of the RSSI measurement.

POWER CONNECTIONS

The power required is 13.8VDC nominal, at 600mA (Tx) nominal. If the POWER LED indicator is not illuminated once power is applied, check the internal 1Amp fuse fitted within the unit.

POWER CONNECTOR	PIN ASSIGNMENT
TOP PIN	***+VE SUPPLY (13.8vdc)***
BOTTOM PIN	***GROUND***

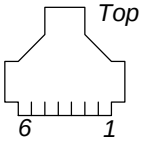
Ext. view of socket

AUXILIARY CONNECTOR

The auxiliary connector is primarily for use with the optional audio handset. The connections to this auxiliary 6 pin RJ11 connector are as follows:

PIN NUMBER	FUNCTION
1	***8 VOLTS***
2	***AUDIO OUT***
3	***GROUND***
4	***MIC INPUT/SENSE***
5	***GROUND***
6	***MANUAL PTT***

External view of socket



The optional audio handset is recommended as an aid in checking installations for radio path viability. This audio handset will only function when fitted prior to applying power to the unit.

The modem upon power up will check the presence of the handset and will inhibit data being transmitted so that voice communications can be established.

Once the path tests have been conducted the audio handsets **MUST be REMOVED** and the unit powered up with the handset removed before data communication can commence.

USER INDICATIONS

The TC-900DR provides 4 LED's that show status information to the user - POWER, RXSIG, SYNC, and TXMIT indications.

The POWER is indicated by a green LED and simply signifies that power has been applied to the unit.

The RXSIG LED (yellow) indicates the level of RSSI signal from the radio IF strip, compared to a threshold level set in the configuration data programmed by the user. If the signal is above the threshold, then the LED indicator is turned on.

In all operation modes except "Programmer mode", the SYNC LED (yellow) indicates when the modem has detected a valid data stream. The SYNC LED is activated, when the modem detects a valid HDLC flag sequence, and remains active until an invalid sequence of seven or more consecutive "1" bits is detected.

The SYNC LED will not be turned on if the RSSI signal strength (as indicated by the RXSIG LED) is below the minimum threshold. This prevents false SYNC detection from noise.

The TXMIT LED (red) indicator is connected directly to the modem's PTT output transistor. Whenever the radio is transmitting, this TXMIT LED indicator will be on.

SPECIAL MODES OF OPERATION

Part of the power-up/reset initialisation phase of the TC-900DR are tests to determine if the modem should enter one of 3 "special operation" modes. I*n these modes the TC-900DR won't operate in its standard run mode.*

- Programmer mode.
- Bit error rate test mode.
- Handset mode.

These modes are only entered if the required setup conditions are present at power up. An error mode of operation can also be entered into, if during normal operation, an error condition occurs.

PROGRAMMER MODE

CABLE - Pins 2, 3, 4, 5 straight through with Pin 6 on the DB9 connector of Port A, connected to pin 5. When the modem is powered up with this fitted, the controller senses this and attempts to enter "Programmer mode" and the "SYNC" LED will flash approx. once per second. (Note, the TC-DRPROG programming software and lead has the required connections). Failure to supply the correct password in time, will cause the modem to abandon the "Programmer mode" attempt, and go on with it's normal power-up procedure.

BIT ERROR RATE TEST MODE

Pin 9 of the DB9 connector of Port A, is normally the Ring Indicate output line. However, if this pin is driven positive (connecting it to pin 6 [DSR] and pin 7 [RTS]), then the modem's data transmitter and receiver will enter the BER test mode. This will activate the RF transmitter, and generate a scrambled bit pattern which should be decoded at a receiver as a constant logic "1" level in the unscrambled data. Any errors in the decoded bitstream, will be "0", and the receiver portion of the modem in this mode, will activate the SYNC LED every time it sees a "0" bit.

Note: As the TC-900DR is full duplex this test can operate in both directions simultaneously.

Every error bit detected, will activate the SYNC LED. For error rates of 1 in 10^3 and above, the SYNC LED will be ON most of the time. A 1 in 10^4 error rate will show the SYNC LED active for approximately 10% of the time. This function provides a crude indication of Bit Error Rate for installation purposes. Note: Error count messages (ET:XXXX) for every 10,000 bits are presented to Port A for the user. If pin 9 ceases to be driven positive, then the BER Test mode is terminated, and the modem restarts it's initialisation phase.

HANDSET MODE

The DFM4-9 modem tests for the presence of a handset plugged into the handset auxiliary port at power up. If a handset is plugged in, the modem will not generate a data stream. However, it will continue to indicate received RF signal strength. The handset has a PTT button, and this signal is connected across the modem's PTT output. Thus the handset PTT switch will activate the TXMIT LED. It is essential to remove the handset from the unit and reapply power to the unit in order to return to normal operation.

ERROR INDICATION MODES

There are 3 error conditions that cause the RXSIG & SYNC LEDs to be used for error indications and not their normal purpose. Two are fatal conditions, that cause the modem to restart after the duration of the error indication phase.

TRANSMIT POWER LOW

While the modem activates the radio transmitter, it periodically checks the transmit power. If the power measurement is less than a threshold set in the non-volatile memory, then the RXSIG and SYNC LEDs are made to alternate, approximately 4 times per second. The TXMIT LED will also be on during this process. This indication condition will persist for the duration of the transmission. As soon as the transmission is discontinued, the error indication will cease, and the two LEDs revert to their normal function. Factory set to 100 milliWatts.

NVRAM READ ERROR

The DFM4-9DR modem accesses the non-volatile memory as part of it's initialisation phase, to read programming configuration data. If the communication protocol with the device is violated, or the non-volatile memory CRC checksum is found to be incorrect, then the modem indicates this by flashing the RXSIG and SYNC LEDs twice alternately. That is, one LED operates ON and OFF twice, then the other. A total of five cycles of this occurs, then the modem restarts initialisation.

SYNTHESISER LOCK DETECT ERROR

If at any time during normal operation, BER mode, or handset mode, the TBB206 frequency synthesiser indicates an out of lock condition, the modem enters an error indication mode for a short time before restarting.

One LED is turned ON (☼), the LEDs are swapped, then both turned OFF (●). Then the latter LED ON again, swap LEDS, and then OFF. This will give the appearance of a sweeping motion between the LEDs. The following table shows all error condition displays.

Tx PWR Err		NVRAM Err		SYNTH Err	
RXSIG	SYNC	RXSIG	SYNC	RXSIG	SYNC
☼	●	☼	●	☼	●
●	☼	●	●	●	☼
☼	●	☼	●	●	●
●	☼	●	●	●	☼
☼	●	●	☼	☼	●
●	☼	●	●	●	●
☼	●	●	☼		repeat
●	☼	●	●		
continue			repeat		

MOUNTING AND ANTENNA CONNECTION

The TC-900DR should be mounted in a cool, dry, vibration free environment, whilst providing easy access to screws and connections. There are 4 mounting holes on the unit. The antenna should be an external yagi antenna but can be a ground independent dipole mounted via a feeder to the antenna connector (SMA type) for short range applications. However the whole radio modem should be clear of the associated data equipment to prevent mutual interference.

ASSEMBLY OF POWER LEAD

A small plastic bag containing a molex connector (M5557-2R) and two pins (M5556-TL) is provided in the packing box.

The pins are designed to take 18-24 (AWG) wire size with insulation range 1.3 - 3.10mm.

Please take care when crimping the pins. 04/01

PBIH Series

15-150 WATTS DC/DC SINGLE OUTPUT

Features

- **Wide selection of models**
- **4 input voltage ranges**
- **High efficiency**
- **Low output ripple**
- **Proven reliability**
- **Good thermal margins**

Specifications

INPUT

Input voltage	12VDC (9.2–16) 24VDC (19–32) 48VDC (38–63) 110VDC (85–140)
Inrush current	20A max. for 110V only

OUTPUT

Output voltage	See table
Voltage adjustment	±10%, ±5% for PBIH-F
Output current	See table
Ripple & noise	Output Volts x 1% + 50mV to -100mV pk-pk
Line regulation	0.8% over input range
Load regulation	0.9%, 0%–100% load
Temperature coefficient	0°C to 50°C, 0.03% per °C
Overvoltage protection	O.V. clamp, PBIH-F Output shutdown, PBIH-G, J, M, R – input must be switched off for at least 30S to reactivate
Overcurrent protection	Fold back – PBIH-F Current limiting, PBIH-G, J, M, R (PBIH-R series is adjustable); PBIH110xxR models are not adjustable
Drift	Output V x 0.5% + 15(mV) per 8 hrs after 1 hr warm-up
Rise Time	200mS max. – PBIH-F, M, R 100mS max. – PBIH-G, J (at 25°C)
Holdup time	10mS (only 110V input)
Remote sense	PBIH-R Series only

OPERATING

Efficiency	70%–89%
Safety isolation (1 minute)	Type – 12, 24, 48V input Input – Output: 1500VAC Input– Case: 1500VAC Output– Case: 500VAC Type– 110V input Input– Output: 2000VAC Input– Case: 2000VAC Output– Case: 500VAC
Insulation resistance	50M (500VDC) Input – Case
Parallel operation	Consult sales office for details
Remote control	PBIH-R Series: Open link: output normal Short link: output off

ENVIRONMENTAL

Operating temperature	0°C to 50°C full load
Cooling	Convection cooled
Storage temperature	-20°C to +85°C
Humidity	85%
Shock	30G, PBIH-F, G and J

2. MANUFACTURER'S TECHNICAL DATA

2.5 Powerbox Modem/DC converter.

PB251 Series

220-330 WATTS DC UPS

Features

- **Ultra-low noise output**
- **Independent battery charging output**
- **DC output OK & battery OK alarms & LEDs**
- **Battery-LVD and alarm**
- **Over-temperature protection**
- **Battery fuse fail LED**

Specifications

INPUT

Voltage:	190 to 264 vac, or 190 to 400VDC
Line regulation:	0.2%typical
Current:	1.4A maximum
Inrush current:	10A maximum
Frequency:	45 to 65 Hz

OUTPUT

Voltage	See table
Current	See table
Load regulation	0.5%typical
Current limit type - load cct	Constant current
Current limit type - batt. cct	Constant current
Short circuit protection	Indefi nite, auto-resetting
Over-voltage protection	17.5 to 20V latching (13.8Vdc output) 31.5 to 39V latching (27.6Vdc output)
Ripple & noise 100 MHz bandwidth	28mVp-p (13.8Vdc output) 55mVp-p (27.6Vdc output)

ENVIRONMENTAL

Operating temperature	0 to 70^{O}C ambient with derating, 5...90% relative humidity (non-condensing)
Over-temperature protection	Automatic & auto-resetting
Cooling requirement	Natural convection
Efficiency	80% minimum

STANDARDS & APPROVALS

Safety	Complies with AS/NZS 60950, class 1, NSW Office of Fair Trading Approval N20602
EMC	Emissions comply with AS/NZS CISPR11, Group 1, Class B. Complies with ACA EMC Scheme, Safety & EMC Regulatory Compliance Marked
Isolation i/p-o/p i/p-ground o/p-ground	4242VDC for 1 minute 2121VDC for 1 minute 707VDC for 1 minute

ALARMS & BATTERY FUNCTIONS

Converter ON/OK alarm	Indicated by voltage-free changeover relay contacts &
green LED	ON=PSU OK
Battery low (& fuse) alarm	10.2 to 12.6V for 12V battery, adjustable 20.4 to 25.2V for 24V battery, adjustable Indicated by voltage-free changeover relay contacts & green LED: ON=BATT OK
Low voltage disconnect	9.6 to 12V for 12V battery, adjustable 19.2 to 24V2 for 4V battery, adjustable
Charger over-load protection	Auto-resetting electronic circuit breaker
Reverse polarity protection	Internal battery fuse
Battery to load voltage drop	0.2 to. 0.25V typical

MECHANICAL

Case size	264 L x 172 W x 67 H mm
Case size with heatsink	264 L x 186 W x 67 H mm
Rack size	232 D x 19" W x 2RU H
Weight	1.9 kg
Weight with heatsink	2.1 kg
Weight (rack mounted version)	5.5 kg

Selection Table

MODEL NUMBER	OUTPUT VDC	OUTPUT I_{LOAD}	I_{BATT}	OUTPUT POWER
PB251-12CM	13.8V	16A	2A	220W
PB251-12CM-H	13.8V	20A	2A	275W
PB251-24CM	27.6V	11A	2A	300W
PB251-24CM-H	27.6V	12A	2A	330W
PB251-12RML	13.8V	20A	4A	275W
PB251-12B	13.8V	20A	4A	275W
PB251-24RML	27.6V	12A	2A	330W

Note: Non standard battery charging current available on request. ie PB251-12CM-H-10 for 10A.

PB251 Series

275-330 WATTS DC UPS

SHEET No.

Queensland Urban Utilities DRAWING No. 486/4/9-0788-005 AMEND. A

G:\194 WATER SUPP\268 Drafting\6248 Plans\Electrical\3. WATER\NETWORKS\4. Gauges-Meters\P0404 Royston St Brookfield\49-0788SetA.dwg Last Saved by 086901 on Wednesday, 14 July 2010 10:28:02 AM

CONSTRUCTION

Cubicle construction 3mm Marine grade Aluminium (5251).
Plinth construction 160x60 channel 6061 T6 Grade Aluminium.
Folded, "Pulse MIG" & "TIG welded with all visible seams and joints fully welded, free from splatter and ground smooth where needed.
External doors and covers fitted with Emka 1011-207 self grip seal.
"D" Handles fitted where indicated on the drawings.
M6 Earth studs fixed to the interior of all doors and hinged escutcheons and on adjacent cubicle interior surfaces.
Door stiffeners, door stays, cable straps, and document holders etc fitted where shown on the drawings.
Lift-off covers and mounting panels fixed with M8 studs & chrome acorn nuts.
Gland plates manufactured from 6mm Bakelite.
Gland plate openings reinforced with 25x6mm flat aluminium bar.
Gland plate seals attached to cubicle not gland plate.
Gland plate fixings are NOT more than 150 mm apart
Hinges Selectrix HI-B650.
Star washers fitted under all hinge screws.

Lock Door

Selectrix 1107 - PSCU1 handle
Selectrix 1107-U123 3pt cam
Lockwood 71 Barel Lock
Emka 1049-U3 roller rod
Lock Code RC496AB

PAINTING

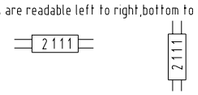
Aluminium Surface Preparation.
Finish smooth all exposed welds, clean, descale, and degrease all surfaces.
Surfaces pretreatment in accordance with AS 1580 & AS 3715 using Novox LF acid etch cleaner, Novacoat 12 conversion coating, & clean water rinses
Apply DULUX ALPHATECH 3000 powder coat to manufacturer's recommendations.
CUBICLE & EXTERNAL COMPONENTS :- DULUX Mist Green (36648) matt finish.
INTERIOR ITEMS (mounting panels, escutcheons, etc.) :- DULUX Bright White (32166)
Minimum Dry Film Thickness all surfaces 40 microns.

OPERATING PARAMETERS

Standard	AS 3439.1
Current & Frequency	AC 50Hz
Rated Operational Voltage Ue	240 VAC
Rated Insulation Voltage Ui	660 V
Rated Auxiliary Voltage	24 VDC / 240 VAC
Rated Current (Main Bus)	N/A
Short Circuit Current Isc	10 kA
Duration of Isc	1 sec
Degree of Protection	IP 55 to AS 1939
Measure of Protection by barriers and enclosures	
Service Conditions	Outdoors
Mass	Not exceeding 200kg
Forms of Segregation	Form 1
Earthing System	TN-S

WIRING

All wiring to be PVC V90 HT 0.6/1Kv Grade with tinned conductor.
Control and instrumentation wiring has flexible copper conductors, and is colour coded as detailed below, numbered each end, and terminated by the use of appropriate pre-insulated crimp lugs.
Power wiring to be minimum 2.5sqmm stranded copper conductors, phase colour coded as detailed below.
Low level instrumentation signals & 4-20mA signals wired in shielded pair minimum size 0.5sqmm. Earthed at one end only.
Earth cables minimum 2.5sqmm flexible.
Doors and hinged escutcheons bonded with 4sqmm flexible earth strap.
Wire numbering will be equal to Grafoplast SI2000 system.
Wire numbers are readable left to right,bottom to top as shown.



COLOUR CODE

Phase wiring (A,B &C)	Red, White, Blue	2.5sqmm (min)
Potential Metering (240/415 VAC)	Red, White, Blue, Black	1.5sqmm
Current Metering (Secondary)	Red, White, Blue, Grey	2.5sqmm
240 VAC Control Active	Red	1.5sqmm
240 VAC Neutral	Black	1.5sqmm
24 V ELV Positive	Orange	1.5sqmm
24 V ELV Negative	Violet	1.5sqmm
24 V RTU Positive	Orange	0.5sqmm
24 V RTU Negative	Violet	0.5sqmm
RTU Wiring	Grey	0.5sqmm
Intrinsically safe wiring	Blue	1.5sqmm
Earth	Green/Yellow	2.5sqmm (min)
Door & Escutcheon Earth Bonds	Green/Yellow	4 sqmm

LABELS

Internal labels W/B/W engraved traffolyte to label schedule.
Warning labels R/W/R engraved traffolyte.

Main switch labels Material B/W/B

Warning labels Material R/W/R

Internal labels secured by M3 chrome plated metal threads.
Labels obstructed by switchboard wiring are relocated to adjacent duct lid.
The duct lid is secured by a single cable tie at one corner.
External labels secured by M3 316 stainless steel metal threads.

Check List (Tick ( ) acceptable items only, note deviations under "REMARKS") (If not applicable mark as N/A)

Switch Board and Control Panels Construction Check List

Item	Activity Description	Hold Points	Checked	By (Initial)
	Busbar	NA		BM
1	Correct size busbar to rated current load to meet AS 2067		( )	
2	Appearance is good i.e. Straight & level		( )	
3	Correct phase identification		( )	
4	Correct hole sizes for joins and terminations		( )	
5	All clearances have been meet		( )	
6	Correct busbar support material has been used		( )	
7	Busbar supports are at the correct distances apart		( )	
8	Correct tensioning & blue spotted at all joins & terminations		( )	
9	Correct hole format in joining cubicle		( )	
10	Sufficient clearances for terminating cable		( )	
11	Heat shrink attached to flags for terminations		( )	
12	All joins are dressed flat		( )	
13	Busbar is insulated at supports		( )	
	Cabling			BM
15	Correct size for demand of circuit		(✓)	
16	Correct phase colouring		(✓)	
17	Correct termination & insulated		(✓)	
18	Correct numbering		(✓)	
19	Correctly formed and neat		(✓)	
20	Correctly supported		(✓)	
21	All cable entry holes are insulated		(✓)	
22	Check cable tray is mounted correctly & all sharp surfaces are removed		(✓)	
23	All cable ties are neatly trimmed		(✓)	
24	All cable clear from busbar's	NA	( )	
25	Check all analog inputs and outputs are shielded		(✓)	
26	All shielded cables have been earthed		(✓)	

Remarks/Remedial Action Required Hold Points:

Remedial Actions Completed ☐ **Signature:** ..... Date:

Approved By: Brendan Stringer		
Signature:	**Checked By: Ben George**	
Electrical Licence No. 114766	**Signature:**	**Date: 24/9/10**

All the above signatories certify that the Electrical switchboard work listed has been checked and tested in accordance with the prescribed procedure and that such work complies in every respect with the requirements of the Electricity Act, AS3000 2007 and AS3008.1.1 1998

Inspection and Test Check List

Switch Board and Control Panels Commissioning Check List (SJQF502)

Item	Activity Description	Hold Points	Checked	By (Initial)
	Switchgear			BG
1	Check all main switches & circuit breakers are the correct			
	• current rating		(✓)	
	• ka rating.		(✓)	
	• trip settings		(✓)	
	• correct to cabling		(✓)	
	• to labels.		(✓)	
	• shunt trips		( )	
	• inter locks		( )	
2	Check the fixings		(✓)	
3	Check the number of poles		(✓)	
4	Check correct operation		(✓)	
5	Correct mechanism		(✓)	
	Control Switches	NA		BG
6	Check correct number of positions		( )	
7	Check correct size		( )	
8	Check correct to labels		( )	
9	Check mountings		( )	
	Contactors	NA		BG
10	Check for correct model no		( )	
11	Check for correct current rating to control		( )	
12	Correct auxiliary contacts		( )	
13	Correct phasing		( )	
14	Correct coil size		( )	
15	Check that it is accessible		( )	
16	Check it has correct overloads		( )	
17	Correct labelling		( )	
	Relays and Timers			BG
18	Check correct rated voltage		(✓)	
19	Correct contacts		(✓)	
20	Correct variances		(✓)	
21	Dip switches in required position		(✓)	
22	Timers set to correct settings	NA	( )	
23	Correct operation		(✓)	
24	Correct auxiliaries		(✓)	
	Transformers and Power Supplies			BG
25	Check for correct voltage ratings		(✓)	
26	Check for correct current ratings		(✓)	
27	Check cabling is correct (no crossed voltage)		(✓)	
28	Check the secondary has been earthed when applicable		(✓)	
29	Check correct labelling		(✓)	
30	Check mountings		(✓)	
31	Check for clearance around for heat extraction		(✓)	

Remarks/Remedial Action Required:

Remedial Actions Completed ☐ **Signature:** ..... Date:

Approved By: Brendan Stringer	
Signature: BG	**Checked By: Ben George**
Electrical Licence No. 114766	**Signature:** **Date: 24/9/10**

All the above signatories certify that the Electrical switchboard work listed has been checked and tested in accordance with the prescribed procedure and that such work complies in every respect with the requirements of the Electricity Act 2002, AS3000 2007 and AS3008.1 1998

Inspection and Test Check List

Switch Board and Control Panels Construction Check List (SJQF 502)

Item	Activity Description	Hold Points	Checked	By (Initial)
	Fuses			BW
1	Check that the cartridge is correct size		(✓)	
2	Correct mountings		(✓)	
3	Correct labelling		(✓)	
4	Check that line side conductors are SDI and < 500mm		( )	
	Current Transformers	NA		BW
6	Correct ratio & size		( )	
7	Correct direction of feed		( )	
8	Correct earthing		( )	
9	Correct cabling		( )	
	Voltage / Current Monitoring Equipment	NA		BW
10	Correct voltage / current range on meter to the installation		( )	
11	Correct to ratio on Cts		( )	
12	Voltmeter terminations are insulated		( )	
13	Check that all meters are preset to zero		( )	
14	Correct indication labels applied		( )	
	Indication Equipment	NA		BW
15	Correct colour		( )	
16	Correct voltage size with matching lamp attached		( )	
17	Correct operation eg. Push to test		( )	
18	Correct labelling		( )	
	Terminal Blocks			BW
19	Correct size to cable		(✓)	
20	Correct colour coding		(✓)	
21	Correct numbering		(✓)	
22	Correctly mounted with lock ends		(✓)	
23	Correct labels		(✓)	
	Neutral Links			BW
24	Check that they are accessible		(✓)	
25	Correct labelling		(✓)	
26	Correct numbers stamped to match circuit identification		(✓)	
27	Correct cabling to circuit identification		(✓)	
28	Check that all neutral links & bar are insulated from the switchboard frame		(✓)	
	Earthing			BW
29	Check that all main earth bar is correct size		(✓)	
30	Check that the main earth is continuous		(✓)	
31	Correctly labelled		(✓)	
32	Continuous for CT wiring	NA	( )	
33	Check that all doors with equipment mount are electrically earth		(✓)	
34	Check all frames are earthed		(✓)

Inspection and Test Check List

Item	Activity Description	Hold Points	Test Result	By (Initial)
	Earthing Resistance & Continuity Test **(Note all readings should be < .5 ohms)** Make sure the MEN connection is removed and attach lead to main earth connection point than test with other lead between		PASS	BS
1	The frame of each section		<.1 Ω	
2	The doors		<.1 Ω	
3	All mounting bolts to all equipment		<.1 Ω	
4	All brackets		<.1 Ω	
5	All earth links		<.1 Ω	
6	All bolts & threads for the mounting of escutcheon		<.1 Ω	
7	All gland plates		<.1 Ω	
8	All cable trays		<.1 Ω	
9	All earth connection		<.1 Ω	
10	Earth secondary of transformers and power supplies		<.1 Ω	
11	Earth surge diverters	NA	Ω	
12	Current transformers	NA	Ω	
	Insulation Test	**Hold Points**	**Test Result**	**By (Initial)**
1	Make sure all control fuses and earths are removed from all electronic equipment before this test is carried out and Set insulation tester (meggar) to 500 volts before proceeding		PASS	BS
	• Red – White	NA	Ω	
	• Red – Blue	NA	Ω	
	• Red – Earth		+200M Ω	
	• Red – Neutral		+200M Ω	
	• White – Blue	NA	Ω	
	• White – Earth	NA	Ω	
	• White – Neutral	NA	Ω	
	• Blue – Earth	NA	Ω	
	• Blue – Neutral	NA	Ω	
2	If all readings are clear the insulation tester is to be set at 1000 volts then proceed with the following	NA		BS
	• Red – White		Ω	
	• Red – Blue		Ω	
	• White – Blue		Ω

Inspection and Test Check List

Switch Board and Control Panels Construction Check List (SJQF 502)				
Item	**Activity Description**	**Hold Points**	**Checked**	**By (Initial)**
	2.5 KV Test This test is used to prove all busbar construction	NA		
1	Make sure all control fuses and earths are removed from all electronic equipment before this test is carried out		( )	
2	All the following tests must be set at a 1 minute time period, result should be 0 Amps		( )	
		Passed	**Test Result**	**By (Initial)**
3	Test between:			
	• Red – White	( )	0 A	
	• Red – Blue	( )	0 A	
	• Red – Earth	( )	0 A	
	• Red – Neutral	( )	0 A	
	• White – Blue	( )	0 A	
	• White – Earth	( )	0 A	
	• White – Neutral	( )	0 A	
	• Blue –Earth	( )	0 A	
	• Blue – Neutral	( )	0 A	
	Supply Authority section	NA		
1	Check supply authority main isolator lockable in the on position		( )	
2	Check all doors before the Ct's. Or meters are lockable		( )	
3	Check where the neutral link is located for the site connection if metres are remotely mounted		( )	
4	Check where the earth link is located for the site connection if meters are remotely mounted		( )	
5	Check double insulated cable for POT fuses are less than 800 mm		( )	
6	Check double insulated cable are taken on line side of Ct.s		( )	
7	Check metre wiring is in building wire and correct size		( )	
8	Check if Ct meter wiring is in steel conduit when closer than 100mm to other conductors		( )	
9	Check there is no equipment connected before on the line side of meters or Ct.s (i.e., surge diverters)		( )	
10	Check list may vary if switch board is going interstate. Alter where applicable		( )	

Remarks/Remedial Action Required:

Remedial Actions Completed ☐ **Signature:** ..... Date:

Inspection and Test Check List

Item	Activity Description	Hold Points	Checked	By (Initial)
	Functional Test			
Prior to connection of supply all inspection and test check lists must be completed		**Hold Points**	**Checked**	**By (Initial)**
1	Point to point test on all cables as per schematic and single line drgs. (Leave spot for drawing. No's and Rev No's		(✓)	
2	Check all Cts are not open circuit	NA	(–)	
Connect supply (personal protection equipment must be used)		**Hold Points**	**Test Result**	**By (Initial)**
3	Check polarity of connection • Red - White	NA	V	
	• Red - Blue	NA	V	
	• Red - Earth		240 V	
	• Red - Neutral		240 V	
	• White - Blue	NA	V	
	• White - Earth	NA	V	
	• White - Neutral	NA	V	
	• Blue -Earth	NA	V	
	• Blue - Neutral	NA	V	
4	Correct voltage / current range on meter to the installation	NA		
5	Check functional operation of switchboard following specific construction issue drawings (leave spot for drawing No's and Rev No's		✓	
6	Check operation of all RCD's < .0.3s		28s	
	Pre delivery check list	F.A.T		
1	Check all punch list items are complete		( )	
2	Check if Compliance label is mounted and correct		( )	
3	Check if heat shrinks is supplied when necessary		( )	
4	Check all load bolts are supplied		( )	
5	Check if m.e.n is mounted after testing		( )	
7	Photos have been taken of every section and given to manager		( )	
8	Test reports have been photo copied and placed in the client folder and SJ Electric folder		( )	
9	As built drawings received back from drafting office , verify Rev No.		( )	
10	Manuals placed in client folder		( )	
11	Switch Board wrapped with delivery details supplied		( )	
12	As built drawings placed in client folder. (Latest revision ( ) Copy of red lined marked Drawing ( )

CONSTRUCTION

Cubicle construction 3mm Marine grade Aluminium (5251)
Plinth construction 160x60 channel 6061 T6 Grade Aluminium
Folded, Pulse MIG & TIG welded with all visible seams and joints fully welded free from splatter and ground smooth where needed
External doors and covers fitted with Emka 1011-207 self grip seal
"D" Handles fitted where indicated on the drawings
M8 Earth studs fixed to the interior of all doors and hinged escutcheons and on adjacent cubicle interior surfaces
Door stiffeners, door stays, cable straps, and document holders etc fitted where shown on the drawings
Lift-off covers and mounting panels fixed with M8 studs & chrome acorn nuts
Gland plates manufactured from 6mm Bakelite
Gland plate openings reinforced with 25x6mm flat aluminium bar
Gland plate seals attached to cubicle not gland plate
Gland plate fixings are NOT more than 150 mm apart
Hinges Selectrix HI-B650
Star washers fitted under all hinge screws

Lock Door
Selectrix 1107 - PSCUT handle
Selectrix 1107-D123 3pt cam
Lockwood 71 Barel Lock
Emka 1049-03 roller rod
Lock Code RC495AB

PAINTING

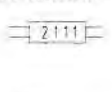
Aluminium Surface Preparation
Finish smooth all exposed welds, clean, descale, and degrease all surfaces
Surfaces pretreatment in accordance with AS 1580 & AS 3715 using
Novox LF acid etch cleaner Novacleat 12 conversion coating, & clear water rinses
Apply DULUX ALPHATECH 3000 powder coat to manufacturer's recommendations
CUBICLE & EXTERNAL COMPONENTS DULUX Mist Green (36648) matt finish
INTERIOR ITEMS (mounting panels, escutcheons, etc) DULUX Bright White (32766)
Minimum Dry Film Thickness all surfaces 40 microns

OPERATING PARAMETERS

Standard	AS 3439.1
Current & Frequency	AC 50Hz
Rated Operational Voltage (Ue)	240 VAC
Rated Insulation Voltage (Ui)	660 V
Rated Auxiliary Voltage	24 VDC / 240 VAC
Rated Current (Main Bus)	N/A
Short Circuit Withstand (Icw)	10 kA
Duration of (Icw)	1 sec
Degree of Protection	IP 55 to AS 1939
Measure of Protection by barriers and enclosures	
Service Conditions	Outdoors
Mass	Not exceeding 700kg
Forms of Segregation	Form 1
Earthing System	TN-S

WIRING

All wiring to be PVC V90 HT 0.6/1Kv Grade with tinned conductor
Control and instrumentation wiring has flexible copper conductors, and is colour coded as detailed below, numbered each end, and terminated by the use of appropriate pre-insulated crimp lugs
Power wiring to be minimum 2.5sqmm stranded copper conductors, phase colour coded as detailed below
Low level instrumentation signals & 4-20mA signals wired in shielded pair minimum size 0.5sqmm. Earthed at one end only
Earth cables minimum 2.5sqmm flexible
Doors and hinged escutcheons bonded with 4sqmm flexible earth strap
Wire numbering will be equal to Grafoplast SI2000 system
Wire numbers are readable left to right, bottom to top as shown



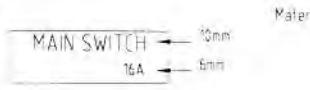
COLOUR CODE

Phase Wiring (A,B &C)	Red, White, Blue	2.5sqmm (min)
Potential Metering (240/415 VAC)	Red, White, Blue, Black	1.5sqmm
Current Metering (Secondary)	Red, White, Blue, Grey	2.5sqmm
240 VAC Control Active	Red	1.5sqmm
240 VAC Neutral	Black	1.5sqmm
24 V ELV Positive	Orange	1.5sqmm
24 V ELV Negative	Violet	1.5sqmm
24 V RTU Positive	Orange	0.5sqmm
24 V RTU Negative	Violet	0.5sqmm
RTU Wiring	Grey	0.5sqmm
Intrinsically safe wiring	Blue	1.5sqmm
Earth	Green/Yellow	2.5sqmm (min)
Door & Escutcheon Earth Bonds	Green/Yellow	4 sqmm

LABELS

Internal labels W/B/W engraved traffolyte to label schedule
Warning labels R/W/R engraved traffolyte

Main switch labels — Material B/W/B



Warning labels — Material R/W/R

Internal labels secured by M3 chrome plated metal threads
Labels obstructed by switchboard wiring, are relocated to adjacent surface
The duct lid is secured by a single cable tie at one corner
External labels secured by M3 316 stainless steel metal threads

5. COMPLIANCE CERTIFCATES

SJ ELECTRIC PTY LTD
Queensland

Ref: Test Certificate P0404

TEST CERTIFICATE

SJ Electric (Qld) Pty. Ltd.
19 Elliot Street.
Albion Qld. 4010
R.E.C. 7623

Attention: Wendy Wong

Level 2 TC Beirne Centre, 315 Brunswick Street Mall, Fortitude Valley Q 4006

Work performed for Brisbane Water at PO404 Royston Street Brookfield 4069 under contract BW: 70103-048 (SJ Electric Job Number WT400106)

Installation Tested / Equipment Tested

- New PRV switchboard
- New main earth
- Earth bonding to main earth link and all switchboard components.

All supporting test sheets attached.

Test Date
3/11/10

For the electrical installation, this certificate certifies that the electrical installation to the extent it is affected by the electrical work has been tested to ensure it is electrically safe and is in accordance with the requirements of the wiring rules and the electrical safety regulation 2002. C.J. Holmes (endorsee to electrical contracting license 7623)

For the electrical equipment, this certificate certifies that the electrical equipment, to the extent it is affected by the electrical work, is electrically safe. C.J. Holmes (endorsee to electrical contracting license 7623)

Signed.
