SP302 - Progress Road Pump Station

Operation & Maintenance Manual Contract Number BW50080-04/05

Manuals Cover Pages

Created 12/09/2006

PROGRESS RD WACOL SPS SP302 MANUALS – STRUCTURE AND GENERAL TOC

Section 1 – General OM	Q-Pulse Id
SP302 Introduction and System Overview	TMS537
SP302 Functional Specification	TMS538
Functional Specification – Sewage Pump Station (Submersible) – 3 Pumps with VRD's ¹	TMS539
Section 2 – Equipment Manuals	
Pumps	TMS540
Generator	TMS541
Cathodic Protection	TMS542
Main Switchboard & Associated Equipment	TMS543
Demag Hoist	TMS544
Valves	TMS545
Well Washer	TMS546
Flow Meter	TMS547
Pressure and Level Sensors	TMS548
Section 3 – Drawings and Drawing Register	
SP302 Location Map	Within
Civil Drawings	TMS537 PDF
Electrical Drawings	version.
Pit Cover Drawings	
JPR – Top Slab	
JPR – Pipework Layouts	
JPR – Switchboard Conduit Details	
JPR – Incomer Conduit Location	
Section 4 – Other Records	
Site Based Training	Within
System Integration Testing	TMS537 PDF
PFC : Inspection & Test Plan	version.
Non Conformance Reports	
Pre-Commissioning Plan, Commissioning Plan, Pump Test Results	
Construction Method Statements	
Certificates	

¹ VSD = Variable Speed Drive

8.0 WELL WASHER

B79800.MAN.doc Revision 1 Date: 31/05/2006 4:18:00 PM

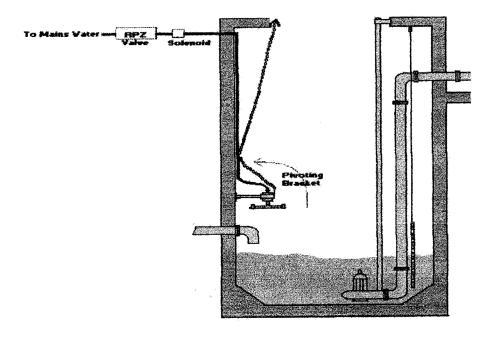

McBerns AutoWellWasher TM

(Australian Patent No. 655111) (International Patent Appl.No.PCT/AU00/00084)

INSTALLATION INSTRUCTIONS for WALL MOUNT BRACKET

Positioning of the device in the well can be critical to the effectiveness of the wash system. Configuration of wells can differ but, in general the Washer should be positioned in the clearest available space to ensure the rotating arms do not come in contact with guide rails, chains, probes, etc.

The mounting bracket is designed to pivot back against the wall (see Figure 1) so as

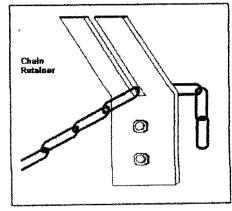

not to impede access when a pump needs to be removed.

Having chosen the position, the mounting bracket is secured to the wall by means of four 12mm stainless steel DynaboltsTM. The bolt holes should be drilled approximately 1 metre above the normal high water line.

If you need to use the bracket extension piece it should now be attached. The extension piece is not needed in all wells depending on diameter and internal configuration. If not used, save it for later installations when multiple extensions may be useful.

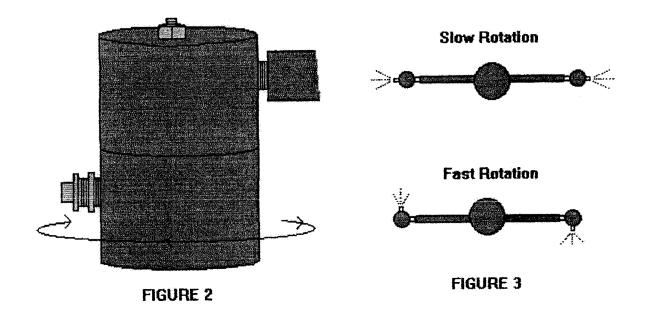

Once the bracket is secured, the Washer head is inserted in the semi-circular clamp and the two locknuts tightened.

Now attach the pivot chain to the lug near the Washer head and pass the chain through the "eye" nut which should be installed in the wall approx. I metre above the Washer. The chain then attaches to the chain retainer which is fixed to the lip of the well opening.

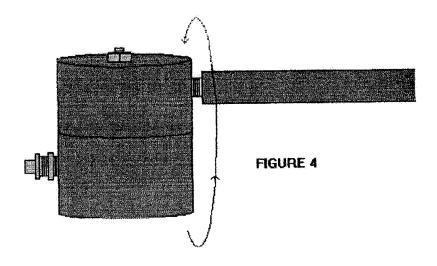

Now the water supply can be connected to the Washer head. You can use good quality 3/4" hose (not garden hose), poly, PVC, copper or whatever best suits your requirements. From our experience the hose method is easiest, as it can be simply dropped down the wall and secured out of harms way using electrical ties.

The next step is to set the rotation speed by adjusting the spray buckets. By loosening the bolt which passes through each bucket, the nozzle housing can rotate through 360 degrees (see Figure 2). The nozzles need to be pointing in opposite directions to cause the spray arms to rotate. Speed of rotation is affected by the angle at which the nozzles are set (Figure 3). Best results are obtained with slow rotation, but care must be taken to allow for drops in water pressure at times of peak water usage in the locality. A temporary drop in water pressure can cause the Washer to stop turning if the initial speed is set too low.

Now by twisting the nozzle buckets on the nipples which join them to the spray arms, the nozzles can be directed to wash the desired areas (Figure 4). Each nozzle gives a wide fan of spray. Usually, one would be directed to cover the well wall from high to low water line. The other can be directed at a sharper angle to

2

hit the top of the pumps, probe/float switches, guide rails etc.

The last task while in the well is to double check that all nuts have been tightened. Above ground you should have already installed an approved back-flow prevention device to the water supply line. Australian Standard specifies a Reduced Pressure Zone (RPZ) valve, and we recommend a 25mm model. Between this and the Washer a solenoid valve should be fitted in the water line. This solenoid is wired to the sewage pump control board so as to open when the pump turns on, and close when the pump stops. Thus the Washer operates as the well is being emptied

THE WELL WASHER KIT CONTAINS:

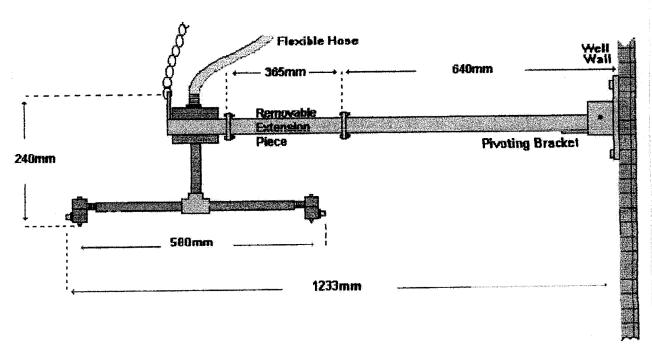

Rotating Washer Assembly
Pivoting Mounting Bracket
Installation Instructions

4 x 12mm SS Dynabolts 5 metres SS Chain "Eye" nut & SS Dynabolt

Chain Retainer with 2 SS Dynabolts

TO INSTALL YOU NEED TO PROCURE:

Back flow prevention device. (Brand is your choice but we recommend 25mm size.) 24volt AC Solenoid. (Brand and type is best chosen by your Electrician). Water conduit and connectors (water inlet for Washer head is 3/4" BSP male).

Please note the dimensions above are a guide only. Slight variations may occur.
